Cutting carbon, creating growth Great Britain:

Department for Transport 2011-01-19 This White

Paper, entitled "Creating growth, cutting carbon:

making sustainable local transport happen", sets out

the Government's aims in meeting two key

objectives: (i) to help create growth in the economy;

(ii) tackling climate change by cutting carbon

emissions. Action at the local level is seen as

delivering gains at the national level. For example,

around every three trips made by car are less than

5 miles in length, and it could be argued many such

trips could alternatively be cycled, walked or undertaken by public transport. The Government sees the encouragement of sustainable travel choices benefiting the economy, cutting carbon and contributing to road safety and public health. The new Local Sustainable Transport Fund aims to help local authorities to encourage people to travel sustainably. The publication is divided into nine chapters with one annex, and looks at the following areas: local transport - choices and implications; decentralising power - enabling local delivery; enabling sustainable transport choices; active travel; making transport more attractive; managing traffic to reduce carbon and tackle congestion; local transport in society.

Housing Design Guide Kent (England). County

Council. Planning Dept 1976

The Pataphysician's Library Ben Fisher 2000-01-01

The Pataphysician's Library is a study of aspects of

1890s French literature, with specific reference to the traditions of Symbolism and Decadence. Its main focus is Alfred Jarry, who has proved, perhaps surprisingly, to be one of the more durable fin-de-siècle authors. The originality of this study lies in its use of the enigmatic list of books termed the livres pairs, which appears in Jarry's 1898 novel Gestes et Opinions du docteur Faustroll, pataphysicien, his best-known prose work. The greatest interest of the livres pairs lies in a group of works by Jarry's friends and contemporaries, primarily Leon Bloy, Georges Darien, Gustave Kahn, Catulle Mendès, Josephin Madan, Rachilde, and Henri de Regnier. Several of these authors feature as the lords of islands visited by the pataphysician Dr Faustroll in his curious voyage around Paris. In conjunction with Jarry's own works, the contemporary livres pairs serve to illustrate the vibrant and experimental atmosphere in which these authors

worked.

The Housing Design Handbook David Levitt
2012-12-06 How well have architects succeeded in building housing and what lessons can be learned from their triumphs and failures? The Housing Design Handbook will give you a complete understanding of what makes successful housing design. Through the analysis of work by Levitt Bernstein and a wide range of other UK practices, it illustrates good design principles and accumulates a wealth of knowledge in a readily accessible format for the first time. Written by a recognised authority in the field, the book provides: a range of cases to illustrate the way that different issues in the design of housing have been approached and with what degree of success a review of the place of housing as the most significant built form in the urban landscape an understanding of the importance of achieving a sense of place as the bedrock of social

continuity a discussion of how flexibility might be achieved in order to accommodate future changes in housing need, if wholesale demolition and replacement is to be avoided more recent examples which explore why certain social groupings are more resistant to design innovation than others and why there has been such an architectural breakthrough in market led, higher density urban living. David Levitt examines the ideas behind the schemes and assesses how successful and sustainable those ideas have proved, making this an essential reference for professionals and students practicing and studying the design and commissioning of housing.

Laboratory Design Guide Brian Griffin 2007-06-01
Laboratory Design Guide 3rd edition is a complete guide to the complex process of laboratory design and construction. With practical advice and detailed examples, it is an indispensable reference for

anyone involved in building or renovating laboratories. In this working manual Brian Griffin explains how to meet the unique combination of requirements that laboratory design entails. Considerations range from safety and site considerations to instrumentation and special furniture, and accommodate the latest laboratory practices and the constant evolution of science. Case studies from around the world illustrate universal principles of good design while showing a variety of approaches. Revised throughout for this new edition, the book contains a brand new chapter on the role of the computer, covering topics such as the virtual experiment, hot desking, virtual buildings and computer-generated space relationship diagrams. There are also 10 new international case studies, including the Kadoorie Biological Sciences Building at the University of Hong Kong.

National planning policy framework 2012 Great

Britain: Department for Communities and Local Government 2012-04-02 The National Planning Policy Framework 2012 sets out the Government's planning policies for England in achieving sustainable development and how these are expected to be applied. It sets out the requirements for the planning system only to the extent that it is relevant, proportionate and necessary to do so. It provides a framework within which local people and their accountable councils can produce their own distinctive local and neighbourhood plans, which reflect the needs and priorities of their communities. This Framework does not contain specific policies for nationally significant projects for which particular considerations apply. Divided into thirteen chapters, with three annexes, it looks at the following areas, including: building a competitive economy; ensuring town centre vitality; supporting a high quality communications infrastructure;

delivering high quality homes; protecting the Green Belt; meeting the challenges of climate change, flooding and coastal change; conserving the natural and historic environments and facilitating the sustainable use of minerals.

Metric Handbook David Adler 2007-06-07

Originally devised as a guide for converting from imperial to metric measurements, 'The Metric Handbook' has since been totally transformed into a major international handbook of planning and design data. The second edition has been completely updated, with most chapters being totally rewritten, to meet the needs of the modern designer. The book contains nearly 50 chapters dealing with all the principal building types from airports, factories and warehouses, offices shops and hospitals, to schools, religious buildings and libraries. For each building type 'The Metric Handbook' gives the basic design requirements and all the

principal dimensional data. Several chapters deal with general aspects of building such as materials, lighting, acoustics and tropical design. There are also sections on general design data, including details of human dimensions and space requirements. It is a unique authoritative reference for solving everyday planning problems. In its various editions it has sold over 100,000 copies worldwide, and continues to be a reference work belonging on every design office desk or drawing board.

In addition, expert advice guides readers on practical and graphical skills, such as mapping, plan types, and transportation planning.

Shopping Environments Peter Coleman 2007-06-07 Shopping centers have become the most common of shopping environments and have influenced the make-up of cities around the world. However, in recent years, the enclosed "mall" has evolved and diversified with new types of retail environments that were developed to better suit their locale and meet public expectation. This design guide has over 600 illustrations that present the core values and considerations that make a successful retail center:

location, catchment user needs, as well as access and layout. Covering everything from site master planning to the essentials of public facilities and the technical systems, this is essential reading for architects of contemporary shopping centers. A series of international examples showcasing different types of shopping environments are included to cover the wide range of designs that have occurred in recent years. From the "out of town" mall to retail parks and mixed use town center developments, the best of contemporary design is illustrated to provide both practical information and inspiration.

Design for Outdoor Recreation Simon Bell 2008-07-02 Design for Outdoor Recreation takes a detailed look at all aspects of design of facilities needed by visitors to outdoor recreation destinations. The book is a comprehensive manual for planners, designers and managers of recreation taking them

through the processes of design and enabling them to find the most appropriate balance between visitor needs and the capacity of the landscape. A range of different aspects are covered including car parking, information signing, hiking, waterside activities, wildlife watching and camping. This second edition incorporates new examples from overseas, including Australia, New Zealand, Japan and Eastern Europe as well as focusing on more current issues such as accessibility and the changing demands for recreational use.

My Garden Is a Car Park and Other Design

Dilemmas Kendra Wilson 2017 Do you share your garden with a car? Worried that your neighbour's trees are blocking your light? Is your garden too big? Too small? An awkward shape? Or maybe you just don't know where to begin... Whether you are grappling with a particular dilemma or just need some inspiration, this guide leads the way forward

with sharp design advice and beautiful images. Read this book and the prospect of tackling your own garden will seem suddenly less daunting and more fun.

Design Guidelines in American Cities John Punter
1999-02-01 This book is a study of design initiatives and policies in five US West Coast cities — Seattle (including Bellevue), Portland, San Francisco, Irvine and San Diego—all of which have had particularly interesting urban design experience of relevance to practice in Britain and other countries. Although these cities are not a representative sample of all American design practice, they provide a rich vein of ideas about recent policy development and current initiatives which will stimulate thought about the formulation of effective design controls. The presentation of substantial extracts from key documents that underpin design

controls in the five cities will be of interest, inspiration and practical use to academics and practitioners who want to know more about American practice and who want to contribute to improvements in the standards and quality of urban design policies and design control. The opening chapter provides a national context and a comparative framework for the study, with a focus on international perspectives, American planning systems and the development of criteria for comparison and evaluation. The five subsequent chapters take each city in turn, briefly reviewing the salient characteristics of each one before presenting an account of how planning and design policy have evolved in the last twenty-five years; key features of the contemporary systems of design control are highlighted and a summary evaluation is made. The focus in the case studies is on how policy and guidance have been formulated, structured and

presented in the various documents that make up the policy framework, how the process of control operates, and how both respond to the criticisms commonly made of design and control. This final chapter draws general conclusions about the experience of the studied cities of wider relevance to American design review practice, but which are of interest to those engaged in design review and policy formulation everywhere.

Global Street Design Guide Global Designing Cities Initiative 2016-10-13 The Global Street Design Guide is a timely resource that sets a global baseline for designing streets and public spaces and redefines the role of streets in a rapidly urbanizing world. The guide will broaden how to measure the success of urban streets to include: access, safety, mobility for all users, environmental quality, economic benefit, public health, and overall quality of life. The first-ever worldwide standards for designing

city streets and prioritizing safety, pedestrians, transit, and sustainable mobility are presented in the guide. Participating experts from global cities have helped to develop the principles that organize the guide. The Global Street Design Guide builds off the successful tools and tactics defined in NACTO's Urban Street Design Guide and Urban Bikeway Design Guide while addressing a variety of street typologies and design elements found in various contexts around the world.

Car Park Designers' Handbook Jim Hill 2005 'Car Park Designers' Handbook' looks at multi-storey car parks as being utilitarian constructions. The authors do not see their design as being a finite art but as a compromise between the motorist's spatial desires and the practical need to achieve economy of

construction.

Nurseries: A Design Guide Mark Dudek 2013-08-06

Architecture can inspire young children; the very shape and form of a daycare center can not only stimulate their imagination but can help children form strong relationships and help promote development. This design guide presents all the elements of building design that combine to create the very best environment for young children and the people who work with them, including building materials, multi-functional spaces and design scaled to suit small children.

Metric Handbook David Littlefield 2008 This book deals with all the principal building types, ranging from airports, factories and warehouses, offices, shops and hospitals. For each such building type, the basic design requirements and all the principal dimensional data is given.

Safety at Street Works and Road Works Great

car-park-design-guide

Britain: Department for Transport 2013-10-01 This publication sets out the statutory requirements for signing, lighting, and guarding at street works and road works. This is the core reference manual for utility companies, local authorities, street work contractors and others whose day-to-day business involves street works (works by statutory undertakers and other utility companies etc) and road works (works to maintain or repair road infrastructure). The code, which covers all of the UK and includes national variations, is now compulsory for highway/road authorities in England, Wales and Northern Ireland. It applies to all single carriageway roads and dual carriageways with a speed limit of 40 mph or less. The code is now divided into three parts: Basic Principles, Operations, and Equipment and Vehicles; site layout diagrams have been redrawn to make them easier to understand. There is: increased emphasis on

using risk assessment and guidance on what to consider in such assessments; strengthened guidance on providing for pedestrians and cyclists and new guidance on traffic control measures related to road closures, one-way working and temporary road obstructions; enhanced advice on other traffic control measures including works near tramways and railways, and mobile/short duration works; and updated advice on high visibility clothing and the signing and conspicuity requirements for work vehicles. Effective from 1 October 2014 when it will supersede the 2001 edition (ISBN 9780115519581).

Concise Townscape Gordon Cullen 2012-09-10 This book pioneered the concept of townscape.

'Townscape' is the art of giving visual coherence and organization to the jumble of buildings, streets and space that make up the urban environment. It has been a major influence on architects, planners

and others concerned with what cities should look like.

Wayfinding NHS Estates 2005-05-23 This publication contains best practice guidance on assessing and improving wayfinding systems in hospitals and other healthcare environments, including signs and other information to help people get to and around the site. Other topics also

discussed include: factors that influence how people find their way; inclusive design for wayfinding systems; the impact of a poor wayfinding system; developing the business case; and tools to help evaluate the adequacy of current systems and identify areas for improvement.

GCEC 2017 Biswajeet Pradhan 2018-05-12 This book gathers the proceedings of the 1st Global Civil Engineering Conference, GCEC 2017, held in Kuala Lumpur, Malaysia, on July 25–28, 2017. It highlights how state-of-the-art techniques and tools in various disciplines of Civil Engineering are being applied to solve real-world problems. The book presents interdisciplinary research, experimental and/or theoretical studies yielding new insights that will advance civil engineering methods. The scope of the book spans the following areas: Structural, Water Resources, Geotechnical, Construction, Transportation Engineering and Geospatial

Engineering applications.

Schools for the Future Anita Foster 2006 The aim of this guide is to inspire the best possible designs for school grounds. It covers all school sectors, including special educational needs, looking at both the development of existing space and new build. Using examples from recent developments it also shows how well designed grounds can enhance learning, encourage well-being and influence behaviour. The three main sections cover: the process of developing school grounds; designing and building; supporting school ground development. It is written for everyone involved in the process, including teachers, governors, architects, local authorities and sponsors. Although not a technical guide, it contains a references to more specific information [The Value of Urban Design](#) Great Britain. Commission for Architecture and the Built Environment 2001 Good urban design offers strong

competitive advantages and does not necessarily cost more to deliver. This ground-breaking report examines the way in which superior urban design adds value by increasing the economic viability of development and by delivering social and environmental benefits.

Cycle Infrastructure Design Great Britain.

Department for Transport 2008 Encouraging more people to cycle is increasingly being seen as a vital part of any local authority plan to tackle congestion, improve air quality, promote physical activity and improve accessibility. This design guide brings together and updates guidance previously available in a number of draft Local Transport Notes and other documents. Although the focus is the design of cycle infrastructure, parts of its advice are equally appropriate to improving conditions for pedestrians. Individual chapters cover: general design parameters; signing issues; network management;

reducing vehicle speeds on cycle routes; bus and tram routes; cycle lanes; off-road cycle routes; junctions; cycle track crossings; cycle parking; public transport integration. A list of references and an appendix of related publications complete the book. It is hoped that, by bringing together relevant advice in a single document, this guide will make it easier for local authorities to decide what provision, if any, is required to encourage more people to cycle.

Easy Access to Historic Landscapes Historic England Publishing 2015-06-05 The aim of this guide is to help property owners and managers provide easier access for all their visitors, whatever their age or level of ability. It will also be of value to designers, planners, and others working to open up historic sites to a wider audience. This revised edition of the guidance, prompted by the implementation of the Equality Act 2010, promotes an inclusive approach

to ensure that every visitor to a historic park, garden or landscape has a meaningful experience. It should be made clear, however, that its primary focus is on providing better access for people with disabilities. Encouraging a much broader range of communities to enjoy and participate in the care of historic parks and gardens is an equally strong priority but one that falls outside the scope of this current document. This document replaces our 2005 version.

Design Out Crime Ian Colquhoun 2007-03-14 Here is a book about the practical design of communities and housing in which people can enjoy a good quality of life, free from crime and fear of crime. Recognising that crime, vandalism and anti-social

behaviour are issues of high public concern, and that the driving forces behind crime are numerous, this book argues that good design can help tackle many of these issues. It shows how, through integrating simple crime prevention principles in the design process, it is possible, almost without notice, to make residential environments much safer. Written from the perspective of an architect and town planner, this book offers practical design guidelines through a set of accessible case studies drawn from the UK, USA, The Netherlands and Scandinavia. Each example illustrates how success comes when design solutions reflect local characteristics and where communities are truly sustainable; where residents feel they belong, and where crime is dealt with as part of the bigger picture of urban design.
